Description

BYOD and follow along: There's a "NEW" version of Google Earth that works in the Google Browser - no need to install software. This version was designed to allow schools to use Chromebooks and Android devices, as well as computers. The new Earth has a magazine-like appearance with places Google has showcased, to bring a wide variety of locations for people to visit, in breathtaking realism. Students can zoom to ground level, walk the streets, tour inside famous landmarks, hike in national parks, swim with divers, see geographical wonders, and discover places they never knew existed. Or, they can choose from 20,000 pre-made tours of sites around the World, complete with "Knowledge Cards," that give facts and information about the sites they are viewing, and suggest other nearby places of interest. They can search for their own terms too. A search for "volcanoes" in a specific location will also direct them to volcanoes in other locations around the World, complete with facts, statistics, and colorful images for each one.

Speakers

Carol LaRow

Google Certified Trainer, Google Certified Teacher, Apple Distinguished Educator, GEG Leader - Capital Region, Carol LaRow, Educational Technology Consulting Presenter

Surveys

NYSCATE 2017 Annual Conference Evaluation
